Coastal Roots Program Receives NOAA Bay-Watershed Education and Training Grant

According to the National Oceanic and Atmospheric Administration’s Coastal Management Program, the Coastal Roots Program has received a $500,000 grant from the National Oceanic and Atmospheric Administration (NOAA) to support its efforts in implementing environmental education programs in coastal communities.

The grant will support the development of curriculum and educational materials that focus on the importance of coastal ecosystems and the need for conservation. The program, which is a partnership between local schools and community organizations, will use these materials to teach students about the importance of preserving coastal ecosystems.

The grant will also support the development of a network of coastal educators who will work together to share best practices and improve the quality of environmental education in the region.

The Coastal Roots Program is a joint effort between the National Oceanic and Atmospheric Administration and the Coastal Management Program. It is funded through a grant from the NOAA Bay-Watershed Education and Training Program.
